

7. Write a C program to check whether a given string belongs to the language defined by a Context Free Grammar (CFG)

$S \rightarrow A101A, A \rightarrow 0A \mid 1A \mid \epsilon$

Code:

```
#include <stdio.h>
#include <string.h>

int main() {
    char s[100];

    printf("Enter string: ");
    scanf("%s", s);

    if (strstr(s, "101"))
        printf("String belongs to CFG");
    else
        printf("String does not belong to CFG");

    return 0;
}
```

Output:

<pre>#include <stdio.h> #include <string.h> int main() { char s[100]; printf("Enter string: "); scanf("%s", s); if (strstr(s, "101")) printf("String belongs to CFG"); else printf("String does not belong to CFG"); return 0; }</pre>	<pre>Enter string: 101 String belongs to CFG === Code Execution Successful ===</pre>
